

Bringing the Classroom to the Science: JINA's Field Trip Grants Program

A large, green, spherical particle detector, likely a bubble chamber or similar, is the central focus of the image. It is surrounded by various pieces of laboratory equipment, including a red fire extinguisher, a yellow toolbox, and a white box. The setting appears to be a well-lit laboratory or research facility.

JINA would like to invite teachers and classes (8th grade and up) to come and visit our research laboratory at ND. We have funds available to cover the costs of transportation and possibly incidentals. Contact us directly for more information and to arrange for a tour.
